

Week beginning 11th March 2022

This week we took part in British Science Week. We carried out some STEM activities and took our learning outside to continue our living things investigation, it was all very exciting! We even learned about a famous scientist called Rachel Carson and used the ground to share her message and her legacy.

We used water and food colouring to do some colour mixing. We know that it happened quickest with less kitchen towel because it was thinner and more absorbent.

Our teachers set us a STEM challenge where we could only use paper and tape to make the tallest tower we could. We needed to think carefully about how we attached the paper together and how we would make our structure strong. This gave us an insight to what it is like to be an engineer.

Finally, we went back outdoors and explored the trees around school. We did some rubbings of the bark on the trunks and compared them. We could see how not all trees are the same and how some have weathered over the winter in different places.
